

Changes to evidentiary requirements for activity 17

29 April 2021

We have updated the evidence requirements for shower rose replacements (activity 17).

The activity guide for space conditioning, shower rose and incandescent lighting now reflects these changes.

The additional requirements are effective for installations undertaken from 10 May 2021.

Changes to low flow shower roses (activity 17)

We have updated the 'Space conditioning, shower rose and incandescent lighting activity guide' and clarified the evidentiary requirements for shower rose replacements (activity 17). We did this because of feedback we received from stakeholders.

The photo evidence for activity 17 has been changed to include a photo of the rose in its original position prior to its removal. This photo evidence must be clear, in focus and show the face of the rose. An example has been provided in Appendix D of the activity guide.

Appendix D of the activity guide gives examples of common roses that are ineligible due to their already efficient flow rate. This is not an exhaustive list but does give installers clarity on what is not eligible. We compiled the list in response to feedback and queries we received from accredited persons.

The updated [activity guide](#) is available at our website.

Bucket-test guidance

We have incorporated feedback from stakeholders regarding the bucket test and its associated challenges. This update explains that the bucket test is not an evidentiary requirement, but installers can use it as a guide to assist them in determining the eligibility of a rose shower.

Where to get help
