

Minimum feed-in tariff 2023-24

Submission received through Engage Victoria

Date submitted: 23/12/2022

Submission written by: Anonymous 11

From December 2022, we began accepting submissions on our Minimum feed-in tariff review 2023-24 via Engage Victoria (www.engage.vic.gov.au). On this website, people were given the opportunity to send us a response to a set of questions we provided.

What parts of our proposed methodology for setting the minimum single and time-varying feed-in tariff rates do you consider are appropriate?

It is not appropriate at all, the solar generated is worth less and less but the electricity sell it to the consumer level is going up every month. The feed-in-tariff must link to market price of retailer sell to us in a pro-rata basis. E.g, the electricity price goes up, feed in goes up with same percentage

What parts of our proposed methodology should we change?

As a result, our draft decision is to set the minimum flat rate feed-in tariff at 4.8 cents per kWh starting 1 July 2023.

Price of feed in will be same as grid sell to consumer

For our overall methodology, or parts of it, what alternative methodologies should we consider?

Price of feed in will be same as grid sell to consumer
