

# Minimum feed-in tariff 2023-24

## Submission received through Engage Victoria

Date submitted: 11/1/2023

Submission written by: Anonymous 16

From December 2022, we began accepting submissions on our Minimum feed-in tariff review 2023-24 via Engage Victoria ([www.engage.vic.gov.au](http://www.engage.vic.gov.au)). On this website, people were given the opportunity to send us a response to a set of questions we provided.

### **What parts of our proposed methodology for setting the minimum single and time-varying feed-in tariff rates do you consider are appropriate?**

I think that an option for time-varying feed-in is a logical step - although most customers will struggle to feed back into the grid without a significant battery/storage setup.

### **What parts of our proposed methodology should we change?**

We have not seen the actual retail price of power and power bills overall reduce at all. This logic does not make sense with encouraging lower emissions and renewable energy uptake. Surely a higher feed-in tariff - or matching incentives - will encourage the move to further solar uptake in the future ultimately taking load off the grid.

### **For our overall methodology, or parts of it, what alternative methodologies should we consider?**

I would suggest a higher feed-in tariff rate to match rising energy costs for end users. A higher variable tariff out of daylight hours also makes sense.
