Solar feed in tariff costing everyone

9/2/16

Hello

Why is the feed in tariff so low?

We pay a lot of money to help save our environment and help others in the local area do the same by feeding extra power into the grid.

We pay top prices from dirty electricity when the sun doesn't shine.

We also pay taxes which you then hand on to these dirty producers as subsidies to allow them to keep polluting.

Wouldn't those subsidies be better spent subsidising more people to fit solar panels to their homes.
