

Greg Moorcroft

roof top solar collectors

10/2/16

Dear Sirs, I wish to put the case for solar generation.

1. Solar generation is clean and carbon free.
2. Any surplus energy fed back into the grid takes some of the load off the generators.
3. Solar generated power reduces the pollution.
4. Power company's and the government have reduced the buyback tariff to about 5 cents for new installers. This rate is grossly unfair as the company can sell back this electricity at 35 cents. This a penalty for citizens that have outlaid serious money to be partially self sufficient and help the environment..
