### **Solar feed in tariff**

9/2/16

I am appalled that the Andrews government, who got into office through the support of solar owners has approved the cut to the pay-in Tariff and allows energy companies to make huge profits sling on our solar energy.

By doing this the government is reducing the financial benefit of solar to households and in turn reducing the number of houses turning to it.

It will take soo much longer to pay off our solar installation and in the mean time we have less money to boost the economy through other purchases.

This is not fair on low income families and the solar industry, those, that the Andrews Government claims to represent.
