Buy back price solar power

9/2/16

Hello

we all want a future- for ourselves and our grandchildren.

Given that climate change is real and that solar power is a part of the solution then encouragement must be given to generate more. The 5 c buy back price is wrong as is the 60 c or so handed out some years ago.

The buy back price must align with the wholesale price to ensure fairness for all and ensure we have participation from as many consumers as possible to push for a future.

Please let common sense and fairness rule the decision making process- for our grandchildren
