Domestic Solar Power Suppliers are being Rorted

9/2/16

As a solar power supplier into the grid I am angry at the pathetic retail buyback prices being offered.

I am really pleased to be a pollution free energy provider into the grid as well as enjoying the use of my own generated pollution free power. By rorting domestic providers the logical consequence of this is to encourage domestic generators to install battery storage. This will ultimately disadvantage the retail & wholesale providers with a negative impact on the wider community.

Please recognise & encourage the power of domestic solar power.
