

Hi All

I would like to see the changes in water pricing be more understanding of people with larger rights

with the proposed changes people with smaller rights receive a greater reduction on their water. Eg person with 1 meg will receive full discount whereas a person on the same out let that has 10 meg will not receive any discount. So larger right owner will be propping up small rights. On most of the channels where the 1 out let is used the larger rights are propping up smaller rights

There should be a fairer way for the discount and encouragement for people to combine out lets thus reducing costs not just looking after the majority of small users

Thanks

Please call for any clarification
