Rooftop Solar

13/2/16

To Whom it May Concern,

I paid a lot of money to get my rooftop solar. I'm a single mum and it took a lot to be able to buy it. At that point it was .25 c KW. How can it be fair to keep dropping the feeding tariff to .5c? It is taking advantage of well intended efforts, by people with limited resources, to do their bit for the environment. I don't get to benefit much myself from having solar because I work full time and I'm therefore not able to use my 'free' electricity much myself.

Please pay us what our solar generated electricity is worth.

Yours sincerely Keren Barnett
