Fair price for rooftop solar power

9/2/16

Hi, The price paid for exported solar power should be a minimum of 50% of the average price the retailers sell the energy. I think there is also a case for rooftop solar to charge a daily supply charge to the retailer to cover our infrastructure. That's what the supply charge was introduced for. There also needs to be a cap on the supply charge. Since 2004 my supply charge has increased from \$.20 a day to \$1.43 day. If it grows at it's percentage increase of 2015, in 5 years it will be near \$3 a day.

Looking for a fair deal
