I demand fair price on the solar power I produce

12/2/16

To the Victorian Government's inquiry,

I demand a fair price on the solar power I sell to the grid. I have invested moneys into the production of zero carbon emissions electricity for the future of our country and our kids. The price I get paid is an insult and I think the government should stand behind the people it represents not the interests of a few rich companies. I will be watching the progress and the results of this inquiry very carefully. And the only outcome that will satisfy is a significant increase in the price of solar the power companies buy from me.
