Re Tariff-Solar

10/2/16

I cannot understand how, over the years my rebate has dropped from circa 60 cents to its current 5 cents; this is due to my having moved house and with each move I have installed solar panels but have received less each time!

I consider that rooftop solar power creates no carbon pollution, no particulate pollution and does not create other environmental and other health problems such as those associated with the mining, transportation or burning of fossil fuels and yet, those who invest in solar are penalised (financially) whilst the market makes a profit.

Totally illogical.
