### **Price of Exported Electrical Energy**

9/2/16

I value this opportunity to submit my thoughts on this issue.

I would hope that any sensible enquiry will seek to find a balance such that there is a greater financial encouragement to install solar. Obviously, the initial 60 cents and 40 cents per KWh were unrealistic but the present rate in Victoria has gone the other way! Considering all the factors, it would now be an opportunity to strike a rate that will be at a more supportive level of return on export to the grid.

I do not need to outline all the benefits of rooftop solar electricity generation as I am sure that these will be brought to your attention or, more likely, you are already aware of them. Thank you for the chance to be a part of the change in our approach to this important matter.
