## **Solar Power Price**

10/2/16

We had solar panels installed a few years ago when there were some good subsidies around. Without these we would not have had the upfront cash to do this.

Rooftop solar power should be encouraged with a fair price because:

- It provides local employment to a number of trades

- It is cleaner than burning fossil fuels

- While I am at work my house is generating excess power which can be used by industry

- Peak demands are on hot days when air conditioners are used. Rooftop solar provides power at this time

- Rooftop solar power creates no carbon pollution, no particulate pollution and does not create other environmental and other health problems such as those associated with the mining, transportation or burning of fossil fuels.
