Feed-in Tariff for solar power

9/2/16

This is supposed to be a “Fair Go” country! The price we get for the “Clean Green Power” we supply to the “Grid”, which is sold-on at a premium price, doesn’t constitute “Fair Trading”! Surely, if a Government is really concerned about the environment and “Global Warming” wouldn’t it favour “Clean Green Renewable” energy from roof-top solar? Even, if it would be at the expense of polluting, coal-fired generation and political donations?
