

Allen Burrows

Dear People making decisions for millions

9/2/16

Solar on the roof is the best direct social inspiration that affects all humans at home and at their business place.

It not only makes the most environmentally best outcome possible but also has had a positive effect on the movement towards saving our biosphere. It is the most economical value energy and if you guys support the profit making moguls who don't even live here by supporting an unequal export to import tariff then you are selling out the future of Australians right here and right now. do the right thing and force the electricity industry to pay the same for electricity as they sell it for with a max of 20% profit only and if they don't like it close them down and nationalize there industries under health and safety issues.
