Rooftop solar power is more valuable and delivers more benefits than dirty, polluting fossil fuels

- Rooftop solar power is more valuable and delivers more benefits than dirty, polluting fossil fuels and the price paid should reflect this.
- Rooftop solar owners just want a fair go. It's not fair that retailers are able to buy cheap, exported solar from one house and sell it to a neighbour at an inflated price.
- The costs that networks (the companies that own the poles and wires) charge for solar power should be minimised as rooftop solar puts less strain on the grid due to its decentralised structure. Indeed, solar power helps reduce the costs of the grid by averting the need to build more expensive poles and wires and minimising loss of electricity.
- Battery stored solar power that is exported to the grid should attract the same price as solar power.
- Rooftop solar power creates no carbon pollution, no particulate pollution and does not create other environmental and other health problems such as those associated with the mining, transportation or burning of fossil fuels.
