A Fair Price for Solar Power !!!

9/2/16

To
Daniel Andrews and the Victorian Labor Government

Rooftop Solar power creates no particulate pollution or other environmental health problems associated with mining transportation or burning of Fossil Fuels.

Rooftop solar is more valuable delivers more benefits than polluting fossil fuels and the price should reflect this. The cost that the network owners put on solar power should be minimised. It puts less strain on the grid due to its decentralised structure. It reduces the cost of the grid by averting the need to build more expensive poles and wires and minimising the loss of electricity. Battery stored energy transported to the grid should attract the same price as solar power.

We 'Rooftop Solar Owners' just want a fair go !!!
It's not fair that retailers are allowed to buy cheap exported solar from one house and sell it to the neighbour at an inflated price.

It's clear that 5c/kWh comes nowhere near to solar's true value.

I hope this email contributes to positive equitable change.
