Unfair feed in tariff

9/2/16

I am paid as a credit on my electricity account a lousy 5.9cents/hWh.for my solar pv electricity.

I pay 25cents/kWh, that is not fair, it is a ripoff, it is exploitation.

I generate more electricity than I use, I am being ripped off.

My next step is to install a battery then leave the grid.

The alternative is to get a fair price for my feed in.
