Suggestion!

9/2/16

I was recently informed that those of us who receive the 6.5cents feed-in tariff in Victoria from our retailer, which in our case is Red Energy, actually are paid the tariff by the retailer and not the Government. While we have to fight for a higher tariff, I suggest that we should form an organised group of users, and negotiate with several retailers on the basis of seeking cheaper rates for imported power and a larger feed-in tariff for our exported power. Our organised group would then agree that the entire group would sign up with the best and cleanest offer we get from the retailer.
