## **My Solar Exports**

9/2/16

Dear whoever,

All I want is a fair go with my solar exports. I am not really after making money from my solar investment even though fairness may dictate that I should.

In the summer time I produce around 300Kwh of electricity of which i consume roughly 100kwh.

I typically export up to 200kwh for which I get paid around 6.2 cents. The retailers buying my electricity then sell this to others and back to me in the evenings when my solar has shut down at around 30cents/kwh.

So in essence we have electricity retailers parasitically making money out of my investment. In effect I am competing with Hazelwood. Hardly seems fair does it ? And of course it isn't.

ALL I WANT IS A FAIR GO !

SO DO SOMETHING ABOUT IT
