**Feed-in tariff for Rooftop Solar Power**

9/2/16

Dear Minister,

I have invested in solar panels on my home to produce cheaper electricity for my family but also to reduce our carbon footprint.

The current feed-in tariff is too low and unfair because electricity is sold back to other consumers at much higher prices.

Please consider increasing the feed-in tariff to make it fairer for existing solar power producers and to encourage more people to invest in solar power.

Thank you for your time.
