### **Rooftop solar rebate**

10/2/16

We are soon to sell our home with rooftop solar that we installed early to reduce our carbon footprint. When we move we will receive a pittance if we do the same at our new home. This is not fair, as the extra power we will generate and return to the grid then gets sold on at an inflated price. We have done the right thing by the environment by generating clean , cheap energy. We should also be reimbursed the true value of exported rooftop solar. Otherwise we will be tempted to go entirely off-grid.
