Enquiry into solar power

10/2/16

Dear sir/ madam,I believe their is an enquiry into the price paid by energy companies for solar power generated by individuals who have elected to invest in solar power.

I would like to add my voice to this submission as I believe electricity companies profit from what I feed back into the grid and pay me 5c kW for electricity they on sell for up to 27 c kW.i have only had solar for 12 months and,already the price I'm paid has gone from 6.2 to 5 cents.I

I installed solar for financial as well as environmental reasons as we are near retirement age and expect a big downturn in future income but in one year our energy supplier has eroded the cost of what we feed into the grid and raised the cost of daily supply and use which ,if the trend continues will erode my investment in panels and the the environment as it will deter others from bothering with the cost.

I believe by feeding into the grid I save the suppliers money in infrastructure and production and am paid to little for the value they get
