**Enquiry into solar power**

10/2/16

I wish to point out, as a producer of rooftop solar power, that recognition should be given to those of us who have considered the impact that production of coal based energy production has on our environment and gone to the extent of installing rooftop solar for clean, low impact energy production. I request that a fair rebate price be set for solar produced power instead of we producers being robbed by the energy companies who resell such energy at an inflated price to benefit themselves.
