Get Fair Dinkum on feed-in tariff

9/2/16

Sirs,

In case you need to be told the current 5c/KWH price for surplus home energy is akin to negative "dumping"

where the retailer is receiving a marginal benefit which hasn't been earned. If politicians are too gutless to correct this, solar homes will defect from the grid and speed up the death-spiral as the remaining customers will be unable to afford the poles & wires and metering fixed charges.

You'll need more than luck to unscramble this egg!
